INVESTIGATION CARD

There are many different kinds of rocks all around us, even if they can't be seen. These rocks can be large or small, smooth or rough, and even sparkly like crystal! Find a few rocks and see what you notice about them. Use your **magnifying glass** to look at them closely. How are they similar? How are they different? Pick one up. Is anything living beneath it? Carefully return the rock to where you found it. Take a walk and find a large rock. Watch the rock for 15 minutes and in your **journal** keep track of any creatures that walk on or around the rock. What do they use the rock for? What would this rock look like from the creature's perspective? Write a story about this rock and all it has seen. Scan the QR code for a **rock ID chart!**
