INVESTIGATION CARD

On a partially cloudy day spread a blanket on the ground outside and try to identify the different types of clouds you see. Make a **cloud viewer** using the QR code on the right to aid in identification. How many different kinds of clouds can you identify? Are they moving fast or slow? Where did the water that makes up the clouds come from? Where will it end up? What do the clouds remind you of? Using your **journal**, pick out your favorite cloud and come up with your own cloud story! Use your **binoculars** to look at the clouds more closely!
